

Applied Productivity Tools using Slides

Learning Objectives

- Define the slides presentation.
- Discuss the basic and advanced functions of slides presentation.
- Demonstrate common productivity tools in slides presentation techniques; and
- Construct and execute different advanced functions in productions by applying slides presentation techniques.

Slide Presentation

- A **slide** is a single page of a presentation.
- A group of slides may be known as a **slide deck**.
- A **slide show** is an exposition of a series of slides or images in an electronic device or in a projection screen.

Microsoft PowerPoint

- This tool offers different features and functions to help the presenter prepare an effective visual aid.
- Can make a report more engaging and interesting.
- Offer advance animation tools which are not available in manual visual aids.

Guides for Making an Effective Presentation

- **Minimalism**
 - ✓ Do not put too many slides in a presentation.
 - ✓ Do not put everything in the presentation, because it is better for the presenter to relay most of the information orally.

Guides for Making an Effective Presentation

- **Clarity**

- ✓ The slides in the presentation must be clear.
- ✓ Fonts should be big enough for the audience to read.
- ✓ Fonts should also be appropriate to the topic to be reported or presented.

Guides for Making an Effective Presentation

- **Clarity**

- ✓ For oral presentations, it is recommended to use a font size of 24 points or larger for headings and a font size of 18 points or larger for body text.

Guides for Making an Effective Presentation

- **Simplicity**

- ✓ Do not put an entire paragraph in the slide.
- ✓ Use key phrases (bullets and short sentences)
- ✓ Follow the 6 x 7 rule that limits the content of each slides to six lines and seven words per line.

Guides for Making an Effective Presentation

- **Visual-orientedness**
 - ✓ Use relevant graphics to make the presentation more interesting.

Guides for Making an Effective Presentation

- **Consistency**
 - ✓ Slides should be uniform.

Guides for Making an Effective Presentation

- **Contrast**
 - ✓ Make the presentation readable.
 - ✓ Contrasting colors must be used for text and background.

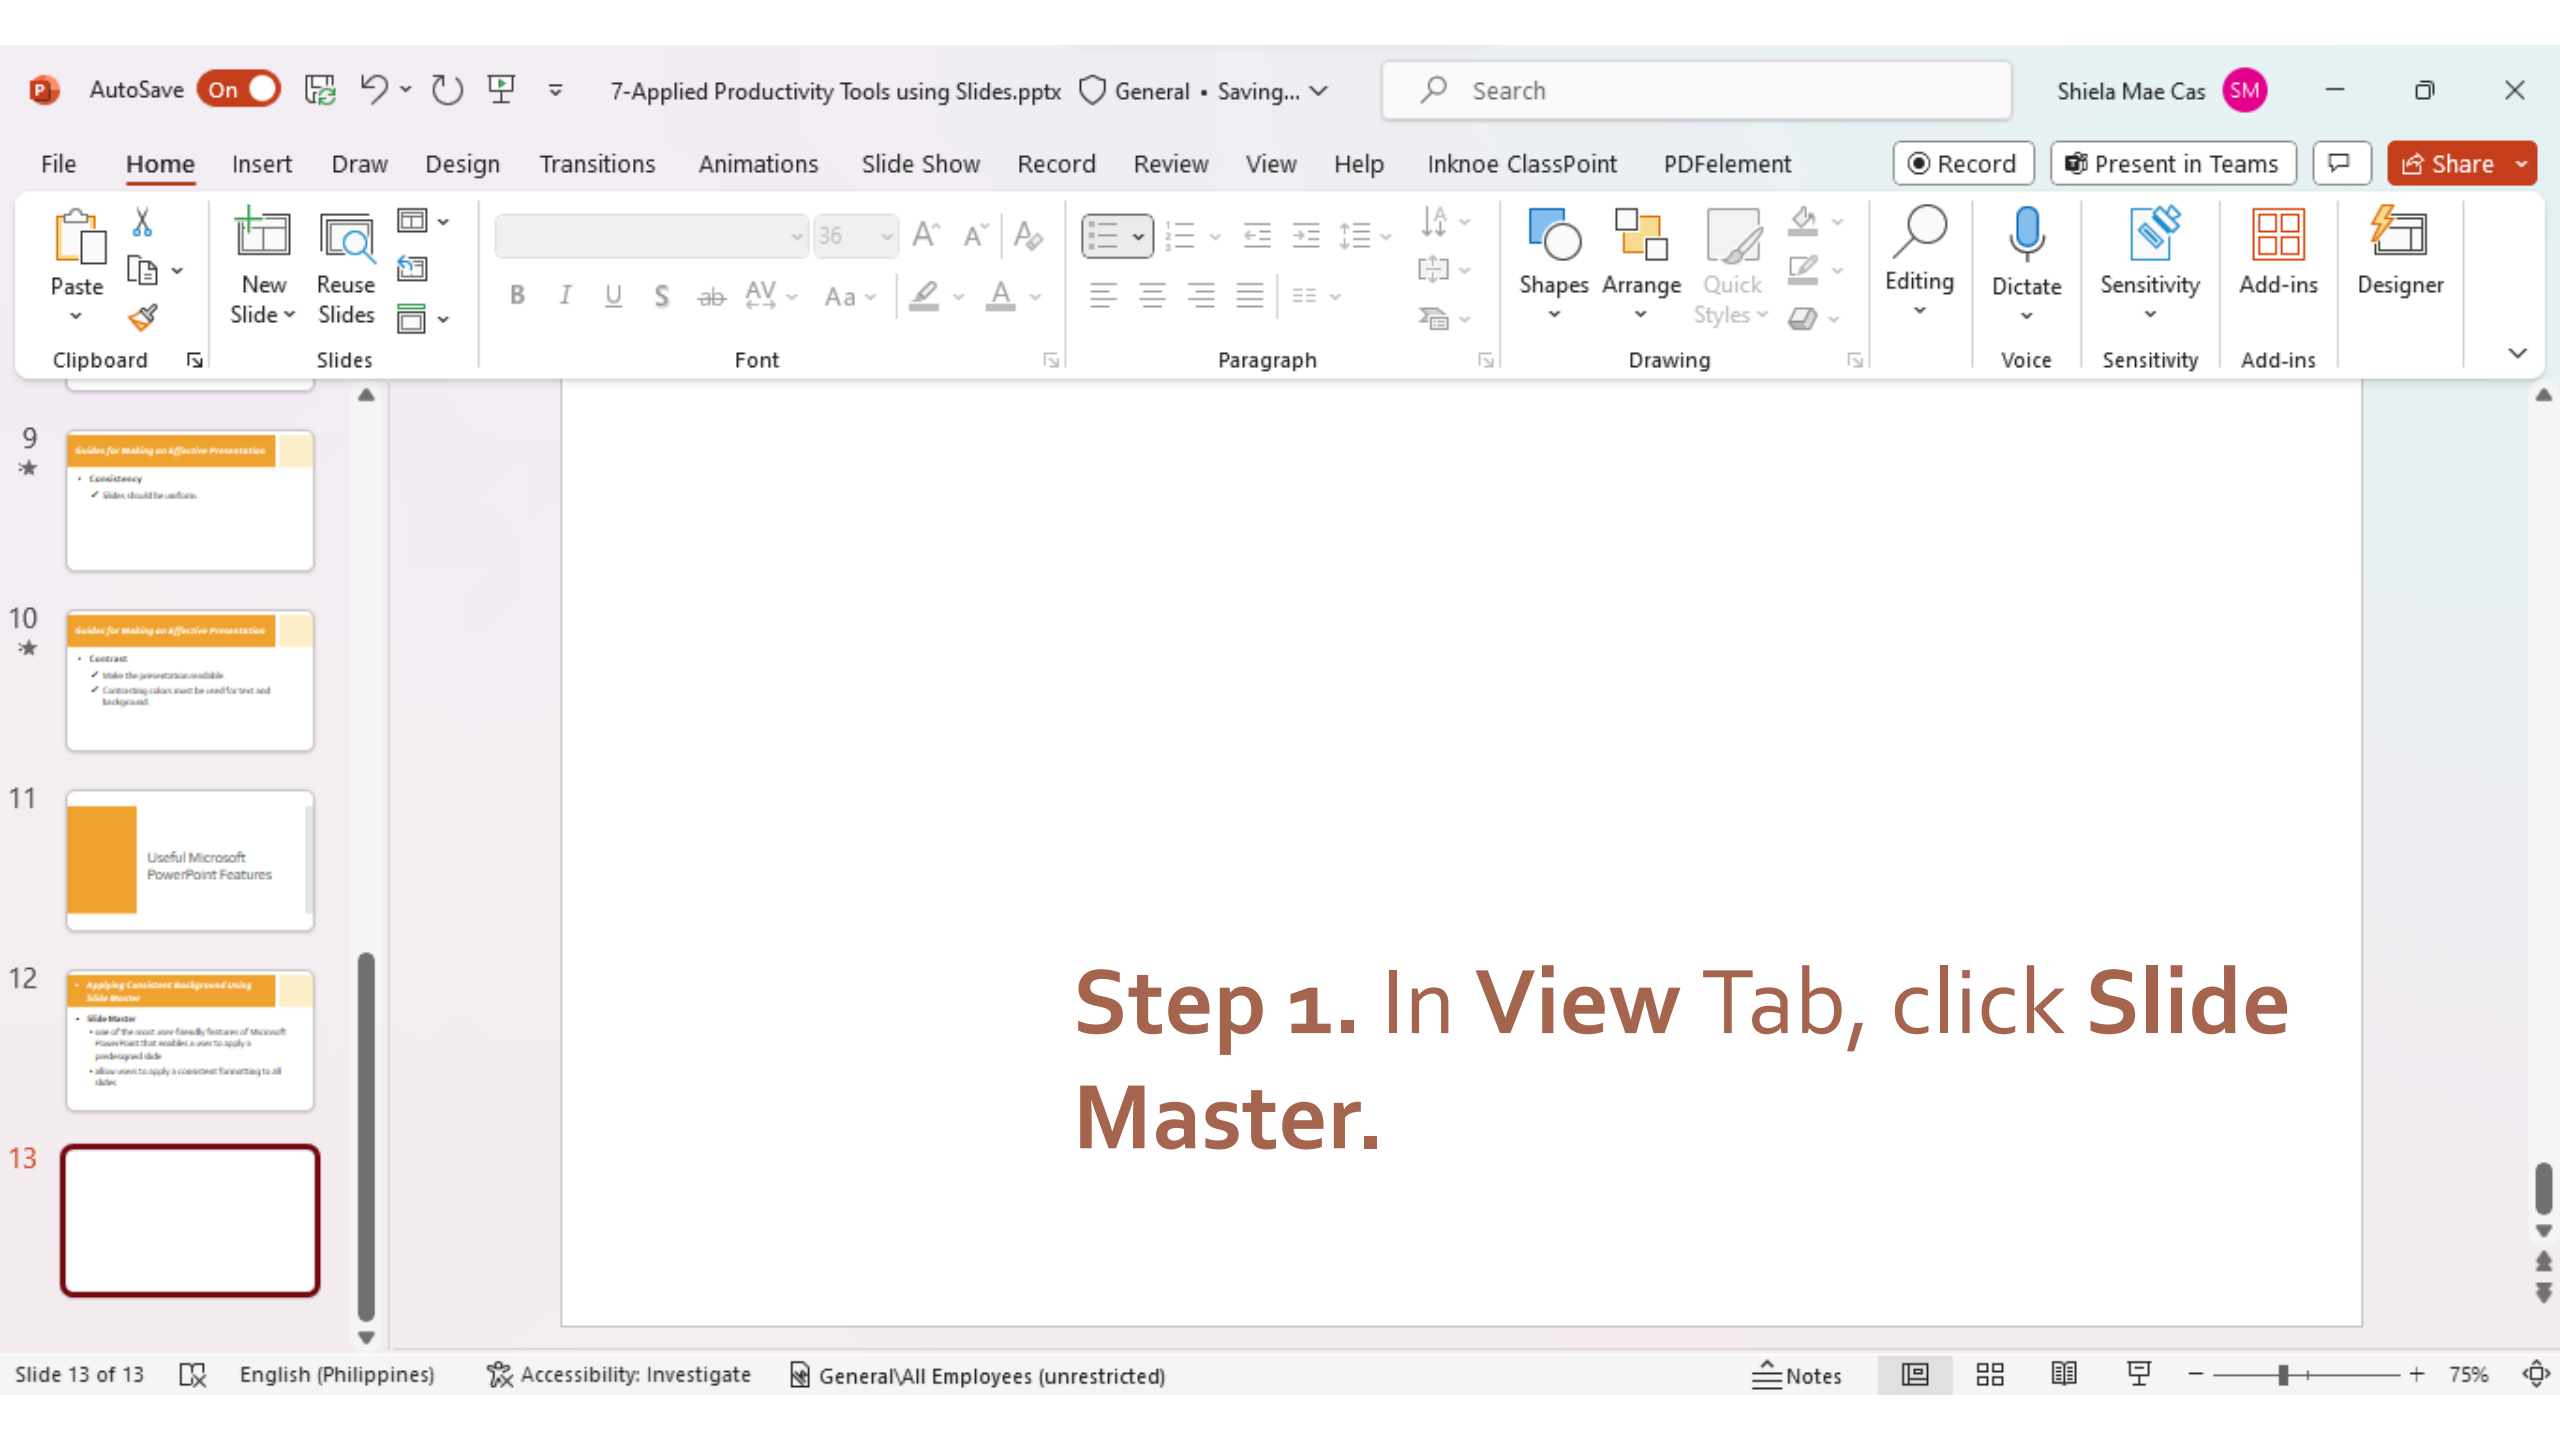

Useful Microsoft PowerPoint Features

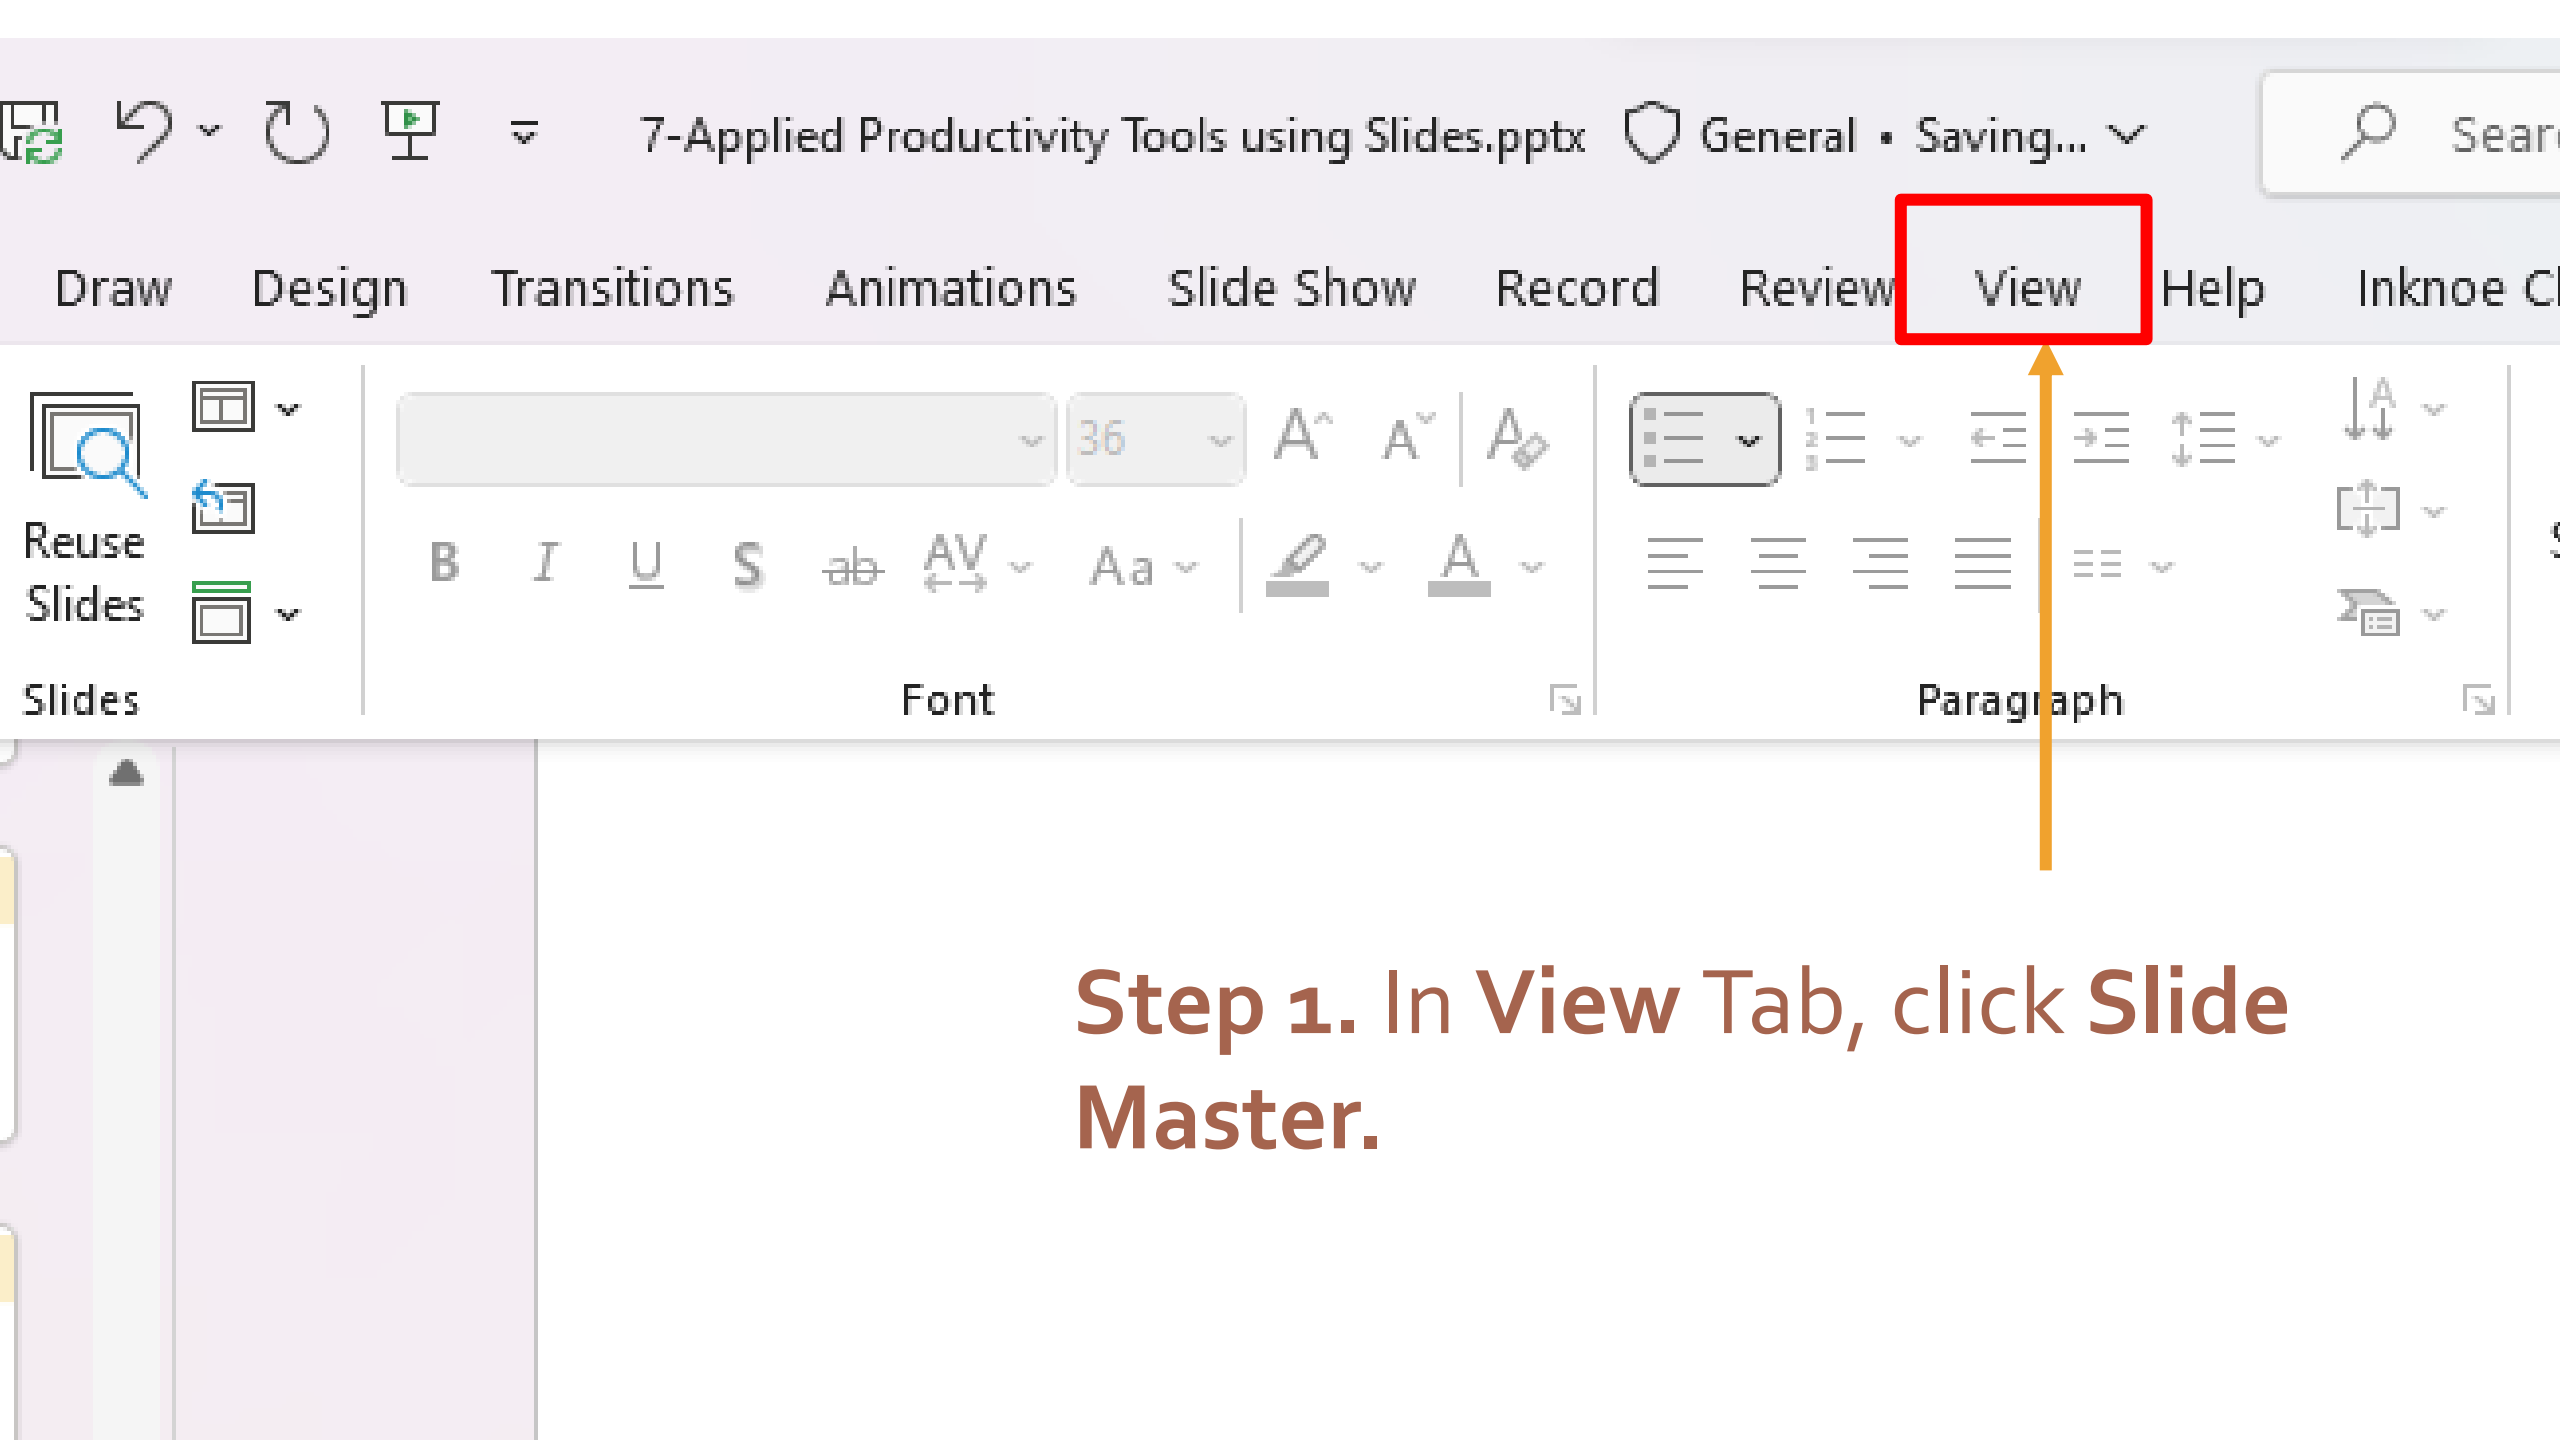

- *Applying Consistent Background Using Slide Master*

- **Slide Master**

- one of the most user-friendly features of Microsoft PowerPoint that enables a user to apply a predesigned slide
- allow users to apply a consistent formatting to all slides

Step 1. In View Tab, click Slide Master.

Step 1. In **View** Tab, click **Slide Master**.

animations on texts and

- *Animations and Timings*

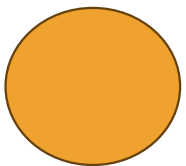

- **Animations**

- **Entrance** is used to show how the object or text will appear in the slide.
- **Emphasis** is used to focus or point attention to a certain object or text.

- *Animations and Timings*

- **Animations**

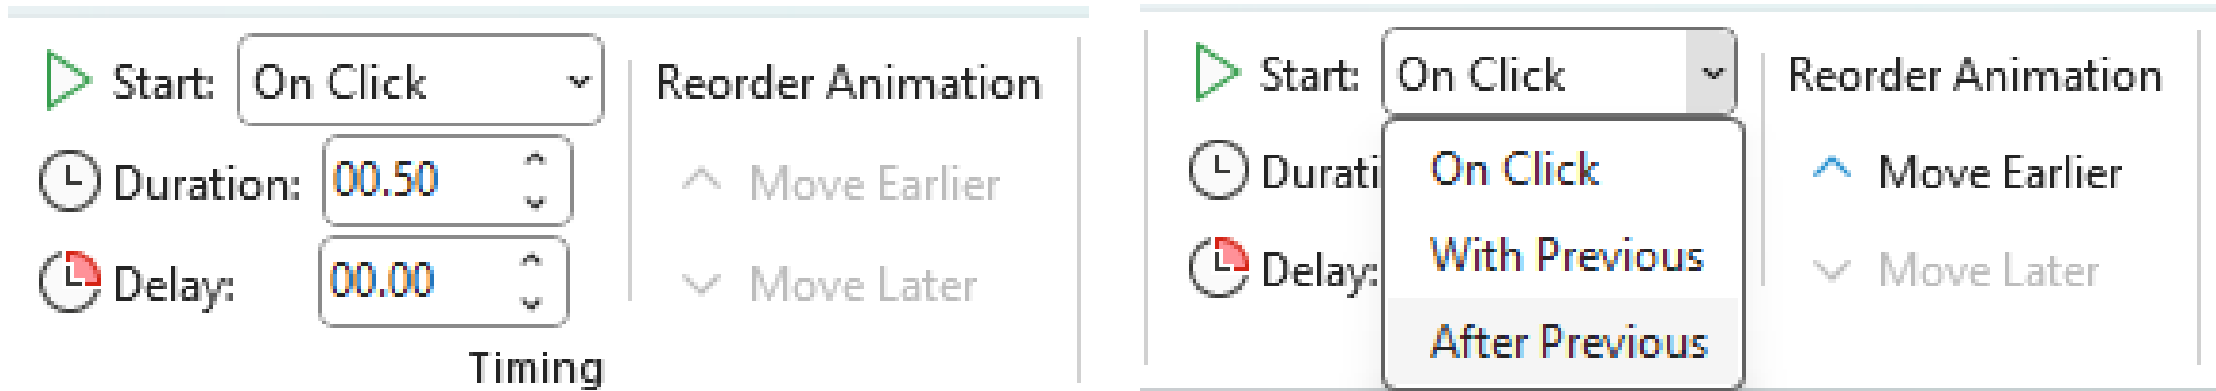

- **Exit** is used to show how the object or text will disappear from the slide.
- **Motion Paths** are used on how an object or text will move from one point to another in the slide.

- *Animations and Timings*

- **Timing**

- used to automatically set when a particular animation will take effect.

- *Animations and Timings*

- **Timing**

- **On Click** object or text will start animating after mouse click.
- **With previous** object or text will appear together with the previous object or text.
- **After previous** object or text will appear after the previous object or text.

- *Animations and Timings*

- **Timing**

- **Duration-** set how long an effect will animate.
- **Delay-** set when an object will start animating.

- *Slide Transition and Timings*

- **Transition**

- allows the user to set effects when transitioning to other slides

- *Slide Transition and Timings*

- **Timing**

- **Duration** is used to set the length of time the transition effect will animate

- *Slide Transition and Timings*

- **Advance Slide Option**

- **After** set the length of time the slide will remain in view before the presentation moves to another slide.
- **On Mouse Click** if selected, the presenter will have an option to move the next slide when mouse is clicked even before the end of the time set in After option.

- *Hyperlinks*

- are used to easily navigate on the slides during a presentation.
- Through hyperlinks, one can jump from one slide to another slide, a Word Document, an Excel spreadsheet, or any document in the web.

- *Hyperlinks*

- *Most used link options in PowerPoint*

- **Existing File or Webpage-** links the object or text to a website or to a file in the hard drive
 - **Link to an existing file in your hard drive-** browse the folder where the file is located and click “OK”
 - **Link to webpage-** type the complete web address in the address box

- *Hyperlinks*

- *Most used link options in PowerPoint*

- **Place in This Document-** links the object or text to a specific slide in a presentation

Example

- *Action Buttons*

- act like hyperlinks
- They provide a clickable object that will automatically direct the presentation to another slide, a Word Document, an Excel spreadsheet, or any document in the web.
- action button utilizes shapes to make it more engaging while a hyperlink is a plain text with link

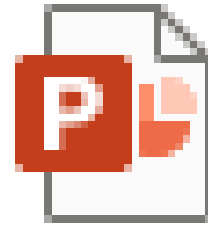

- *Action Buttons*

- *Built-in Action Button*

- **Go back or previous.** It proceeds to the previous slide.
- **Go forward or next.** It proceeds to the next slide.
- **Go to beginning.** It proceeds to the first slide.
- **Go to end.** It proceeds to the last slide.
- **Return.** It brings back the slide that was navigated before the current slide.

- *Embedding Object in Microsoft PowerPoint*

- Embedding or importing objects is one of the most useful features of Microsoft PowerPoint.
- This makes it easy to manipulate an object using other applications.
- One can embed MS Excel tables, bitmap image, MS Word documents, and other types of files supported by MS PowerPoint.
